## CONSIDERATIONS

### PLANT SOURCING:

- Locally eco-sourced plants should be used where available.
- Numbers should allow for a maximum spacing of 1 plant per 1.5m<sup>2</sup> (1m<sup>2</sup> preferred to allow for inevitable mortality rates)
- Gender Dimorphic Species; requiring stock sourced from seed, not cuttings, so that a mix of male & female plants are planted and can therefore produce fertile seed.

### PLANT MAINTENANCE:

- Planting should occur in Spring to allow two growing seasons of establishment before the first winter.
- Plant holes should be well worked with added slow release fertiliser and compost.
- Re-vegetation areas must be heavily mulched with wood chip, to suppress weeds and contain moisture.
- Deep irrigation should be provided for at least the first five years to allow for strong plant establishment.
- Necessary rabbit protection must be applied to all planted and protected areas, in the form of rabbit proof fencing, individual plastic sleeves around plants and poison programs.

NOTE: ALL PINUS, PSEUDOTSUGA & CYTISUS ON SITE TO BE REMOVED.
